

## **INFORMATION LEAFLET ELBURG® OLIVE OIL FROM SPAIN**

Page 1 of 2

**Available in unbreakable PET Plastic Bottles and HDPE Jerry Cans  
for Retail and Foodservice**

Elburg Global B.V. is proud to present different types of olive oils from Spanish origin to complete your retail or catering assortment. The olive oil is produced in Spain and then bottled in the Netherlands. Elburg Global B.V. is selecting the best olives from the Mediterranean to produce an olive oil ideal for baking, frying and for preparing dressings and sauces.

### **Extra Virgin Olive Oil**

Top grade olive oil smelling and tasting just like the olive from which it came from. The oil has less than 0,8% acidity, the olives have been picked and pressed the same day, and the oil has a strong, green colour with a perfect aroma. Extra Virgin Olive Oil is generally used for salads and is adding an exclusive taste to any dishes.

### **Olive Pomace Oil**

Olive Pomace Oil is a blend of refined pomace oil and extra virgin olive oil, which produces a nice taste and aroma of olive oil. The product is mainly sold to the catering sector as well as the regular consumer because its price is more economical than pure olive oil and is the perfect oil for deep-frying.

### **Intelligent Innovative Packaging**

When olive oil was first introduced to world markets, olive oil was packaged only in tins or glass. Here at Elburg Global B.V., we recognized that a product for a modern world should take advantage of modern packaging methods.

In response, we decided to pack the olive oil in a durable and virtually unbreakable plastic bottle that maintains the integrity of the product which results in lower shipping and warehousing costs and a significantly lower level of damage.

Since the first introduction of olive oil in plastic packaging, all the major olive oil packers have followed suit and we are proud to be one of the first companies in bringing convenience and ease of use to our customers all over the world.

Our olive oils are available in plastic PET-bottles of 1 litre, 2 litre and 3 litre, and in HDPE jerry cans of 5 litre, 10 litre, 17 litre, 20 litre and 25 litre.

Our olive oil products meet the highest European standards towards quality control. Technical specifications are available upon request and product verification is performed by the respective inspection system SGS. We are ISO 22000:2005 certified.

### Advantages

#### Pure Taste

The oil tastes good and packed in PET it maintains the integrity of the product. PET complies with international food contact regulations.

#### Lightweight

10% weight of an equivalent glass bottle, PET-bottles reduce shipping costs by about 30%.

#### Unbreakable

PET-bottles don't break, which make them safer and easier to transport.

#### Size

Pet bottles are considerably smaller than glass bottles, so you get more of them in the same storage space during transport. And because the material in the wall is thinner, shelf utilization is improved by 25% compared to glass.

#### Long shelf-life

Very good shelf-life performance, especially with the new higher barrier formulations. The low permeability of PET to oxygen, carbon dioxide and water means that it protects and maintains the integrity of the oil giving a good shelf life.

#### Recyclable

Excellent environmental profile due to single material. Used PET bottles can be washed, granulated into flakes and reshaped as PET bottles or employed as material for strapping, carpeting, fiber filling, etc. PET is made from the same three elements (carbon, oxygen, and hydrogen) as paper, and contains no toxic substances. When burned, it produces carbon dioxide gas and water, leaving no toxic residues.
